Knowledge Base

What you gave us, how we will use it, and what we still need

Prepared by OpenXcell Technolabs · 5 October 2026

The AI does not make up mental-health advice. It uses the content your team wrote and says it warmly. When someone may be in danger, it does not write the reply at all — it sends your exact words and brings a person in.

Tier 1 means everyday stress. **Tier 2** means a professional would help. **Tier 3** means urgent, with a person involved now. Each section below includes one real example, taken word for word from your files (long parts are shortened with "…").

1. Conversation files and self-help

WHAT YOU GAVE US

Sample conversations between a user and the AI, lists of questions and phrases, and self-help material such as worksheets and exercises.

Example from your files — SELF-HELP CONVERSATIONS, "Helping a client ground themselves during overwhelm"

User: I feel like I can't handle this anymore.

AI: Hey, what's happening?

User: I am having a huge argument with my friend right now, and I can't take this pressure anymore. I think I might collapse. My emotions are all over the place

AI: It sounds really intense. Can you tell me where you are

User: I am sitting in a classroom crying. It's getting very difficult to handle myself. I just cannot stop crying.

AI: I hear you. Before we can focus on the situation, can we spend the next few minutes to help calm you?

User: I can try.

AI: Let's try closing our eyes and taking short breaths. Remember the focus is YOU and not the situation.

…

AI: Please take your time. I am right here.

User: hmm

AI: How are you feeling right now?

User: A bit better.

What this shows: The AI calms first, asks permission, and keeps it short — the style we want for self-help.

HOW WE WILL USE IT

- The sample conversations teach the AI how to talk: warm, simple, one question at a time. We also use them to test it.
- The question lists are its menu. It asks your questions instead of making up its own.
- After listening, it offers one self-help exercise from your material, and only with the person's permission.

WHAT WE NEED FROM YOU

- Your best sample conversations, so we know the voice you want.
- What the hand-over notes in the scripts mean in practice (for example "start crisis protocol").
- Which self-help exercise suits which concern.
- Finished versions of any files that are incomplete.

2. Tier 1: everyday support

WHAT YOU GAVE US

Guidance for everyday stress: how to tell how serious something is, questions for common life situations, example conversations, and self-help.

Example from your files — Conversation Combinations – Tanisha, “Conversation 6 (Tier 1) – Overwhelmed with chores”

User: I left my home to come to this country, and I am having such a hard time managing everything.

AI: Moving to another country can be quite hard to manage initially. Can you tell me more about how long has it been since you moved to this country, and how has it been for you since then?

User: I moved here 3 months ago. Unlike at home, where everything was readily available for me, I have to do everything on my own. I want to go back home. But I know I can’t do that. I need to work hard to make things work. But it’s just that I have been having such a hard time.

AI: Makes sense, moving away from home can be challenging. How have you been feeling about all this?

User: I feel so lost. I am finding it so hard to manage my household chores, my classes, and my work. It’s like I don’t have enough time for anything.

AI: Seems like you have been having a hard time managing your time. What do you think has been the most difficult thing for you to manage?

…

AI: That’s good. Would you like me to help you with it?

User: Yes, please.

AI: Great! We could start with making a time-table and a list of things that need to be done first. Do you think you would want to try this and see how it works?

User: Yes, I think it might help.

What this shows: The AI listens, asks one question at a time, then offers one small, practical step.

HOW WE WILL USE IT

- The AI listens, asks your questions and offers self-help.
- Quietly, it tracks how things develop over the whole conversation, not just one message.
- It only suggests a professional when it is confident the situation calls for it. It never diagnoses.

WHAT WE NEED FROM YOU

- Your view on when everyday stress should become “a professional would help”.
- Sample messages marked with the tier you would give, so we can check the AI agrees with you.
- One agreed list of emotions and one list of life situations.
- Your wording for the first gentle suggestion of a professional.

3. Self-harm and suicidal thoughts

WHAT YOU GAVE US

A list of danger phrases, exact replies to send, safety questions, and example conversations.

Example from your files — Conversation Combinations – Tanisha, “Conversation 46 (Tier 3) – Thoughts of self-harm”

…

User: Yes. I have been struggling to pay my rent. My coursework is extremely difficult. And I have a loan to pay off. I had a part time job to help me with my expenses here, but I recently got fired from that. I am worried that I may not be able to support myself anymore. And I can’t put the pressure of the loan on my parents back home. They have already retired and cannot afford to pay back the loan. I don’t know what to do. Thoughts of ending my life keep coming to me. I am worried that I may hurt myself.

AI: I am so sorry you feel this way. Thank you for sharing this with me. Could you tell me how often these thoughts occur? And do you have a plan on how to do it?

User: I have these thoughts almost all the time. But I don’t really have a plan.

AI: Thank you for being honest with me. Would you say that you are safe right now?

User: Yes.

AI: That’s good. Your safety is of utmost priority, and since I can only help you in a limited way right now, I will get you in touch with someone who could help you immediately. Could you stay with me till then?

this conversation should proceed based on prescribed protocol for dealing with suicidal clients

---

What this shows: The AI asks about the thoughts and a plan, checks safety, and hands over to a person. Your note at the end names the protocol that applies.

HOW WE WILL USE IT

- Every message is checked for danger first, by meaning rather than exact words.
- If it matches, the AI sends your exact reply. It writes nothing itself. A person is alerted.
- The AI stays with the person until help arrives.

WHAT WE NEED FROM YOU

- Many more example phrases, from direct to indirect, including slang.
- Examples that sound alarming but are not, so we avoid false alarms.
- What happens after the exact reply: follow-up and safety planning.
- Your crisis team details and the helplines the AI may mention.

4. Harm to others

WHAT YOU GAVE US

Danger phrases and replies for anger and violence. Also entries for people who are being harmed, but **the exact replies for those are missing**.

Example from your files — 22-8 Offline Work Week 2, “Risk of Harm to Someone Else – Tier 3”

User: I got into an argument with someone at a bar a few days ago. He kept insulting me, and I wanted to hit him. I left before anything happened, but I’m still furious when I think about it. Part of me wants to find him and teach him a lesson because people shouldn’t be allowed to disrespect me like that.

AI: When you think about confronting him now, what do you imagine doing?

User: I’ve thought about finding him and hitting him. I know it could cause trouble for me, but honestly, part of me thinks he deserves it. I don’t like walking away from someone who thinks they can treat me that way.

AI: Do you know where he is, and are you currently planning to go there?

User: I know the bar he usually goes to. I’ve thought about going there tonight. I haven’t decided yet, but I’m still angry enough that I might.

AI: Given that possibility, I strongly encourage you not to go to that location and to keep some distance between yourself and anything you could use to hurt someone. Can you stay somewhere away from him and involve someone you trust until the anger comes down?

…

AI: Hmmm. But for tonight, for your own and other people’s safety, it is important that you postpone any confrontation, stay with your friend, and seek urgent professional support. I will put you in touch with a professional who will help you out. Please stay with me.

User: Okay.

What this shows: The AI asks about the plan, steers the person away from harm, and brings a professional in.

HOW WE WILL USE IT

- The same danger check runs on every message.
- If someone may harm another person, the AI asks your safety questions and brings a person in.
- If someone is being harmed, the AI listens, does not push for details, and a person is alerted.

WHAT WE NEED FROM YOU

- **The missing exact replies** for people who are being harmed. This is the top item.
- Phrases for someone who may seriously harm a specific person.
- Legal guidance on what must happen in these cases, including child safety.
- Your view on how to protect people who may be monitored at home.

5. Suicide plans and attempts

WHAT YOU GAVE US

Danger phrases for plans, an exact reply, your emergency steps, and hand-over wording in the scripts.

Example from your files — Conversation Combinations – Tanisha, “Conversation 5 (Tier 3) – Struggling with loneliness → Self-harm thoughts”

…

User: It’s been terrible. I was not able to sleep last night. I am thinking of ending it all.

AI: Could you tell me what exactly you mean when you say that you are thinking of ending it all? You can be honest with me.

User: I don’t know. I sometimes think of ending my life. I don’t want to life like this.

AI: I am so sorry about the way you have been feeling, but thank you for sharing this with me. Could you tell me if you are having these thoughts right now, and if you have any plans regarding it?

User: Yeah, these thoughts keep coming. I have some sort of a plan. I am quite scared of carrying it out. But I don’t know.

AI: Thank you for being honest with me. Could you tell me if you are safe right now?

User: Yeah, kind of.

AI: Okay. And are you alone?

User: Yes.

AI: Thank you for letting me know. It would be great if you could avoid being alone for a while, Till then I will get you in touch with a professional for further support. Please stay with me.

this conversation should proceed based on prescribed protocol for dealing with suicidal clients

---

What this shows: The AI asks about a plan, whether the person is safe and alone, encourages not being alone, and hands over to a person.

HOW WE WILL USE IT

- The AI recognises the danger, sends your exact reply and alerts a person right away.
- It stays with the person and points to emergency help while a person takes over.

WHAT WE NEED FROM YOU

- **A written crisis process:** who is called, how fast, and how the alert reaches them. Your scripts refer to one, but we have not received it.
- Emergency numbers and helplines the AI may mention.
- Phrases and a reply for an attempt that has already happened.
- A decision, with your legal team, on asking for location and contacting emergency services.

> We recommend this part does not go live until the crisis process is written and tested. The AI is not a crisis service: it recognises danger, uses your words, stays with the person and brings a person in.

Questions to discuss

1. Should the AI follow your sample conversations closely, or only use them as a style guide?
2. When your scripts say “start crisis protocol”, what happens next?
3. When should everyday stress become “a professional would help”?
4. Who writes the missing replies for people being harmed, and by when?
5. Can your clinicians mark a set of sample messages so we can prove the AI behaves as you intend?
6. Who owns the safety content after launch?
